# Introduction to Data Definition Language

## **Objectives**

After completing this lesson, you should be able to do the following:

- Categorize the main database objects
- Review the table structure
- List the data types that are available for columns
- Create a simple table
- Explain how constraints are created at the time of table creation
- Describe how schema objects work

# Lesson Agenda

- Database objects
  - Naming rules
- CREATE TABLE statement
- Data types
- Overview of constraints: NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK constraints
- Creating a table using a subquery
- ALTER TABLE statement
- DROP TABLE statement

# **Database Objects**

Object	Description		
Table	Is the basic unit of storage; composed of rows		
View	Logically represents subsets of data from one or more tables		
Sequence	Generates numeric values		
Index	Improves the performance of some queries		
Synonym	Gives alternative name to an object		

# **Naming Rules**

#### Table names and column names must:

- Begin with a letter
- Be 1–30 characters long
- Contain only A–Z, a–z, 0–9, \_, \$, and #
- Not duplicate the name of another object owned by the same user
- Not be an Oracle server—reserved word

# Lesson Agenda

- Database objects
  - Naming rules
- CREATE TABLE statement
- Data types
- Overview of constraints: NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK constraints
- Creating a table using a subquery
- ALTER TABLE statement
- DROP TABLE statement

#### **CREATE TABLE Statement**

- You must have:
  - The CREATE TABLE privilege
  - A storage area

```
CREATE TABLE [schema.]table (column datatype [DEFAULT expr][, ...]);
```

- You specify:
  - The table name
  - The column name, column data type, and column size

# **Creating Tables**

Create the table:

```
CREATE TABLE dept

(deptno NUMBER(2),

dname VARCHAR2(14),

loc VARCHAR2(13),

create_date DATE DEFAULT SYSDATE);

table DEPT created.
```

Confirm table creation:

```
DESCRIBE dept
```

```
DESCRIBE dept
Name Null Type
-----
DEPTNO NUMBER(2)
DNAME VARCHAR2(14)
LOC VARCHAR2(13)
CREATE_DATE DATE
```

# Lesson Agenda

- Database objects
  - Naming rules
- CREATE TABLE statement
- Data types
- Overview of constraints: NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK constraints
- Creating a table using a subquery
- ALTER TABLE statement
- DROP TABLE statement

# **Data Types**

Data Type	Description
VARCHAR2(size)	Variable-length character data
CHAR(size)	Fixed-length character data
NUMBER(p, s)	Variable-length numeric data
DATE	Date and time values
LONG	Variable-length character data (up to 2 GB)
CLOB	Maximum size is (4 gigabytes - 1) * (DB_BLOCK_SIZE).
RAW and LONG RAW	Raw binary data
BLOB	Maximum size is (4 gigabytes - 1) * (DB_BLOCK_SIZE initialization parameter (8 TB to 128 TB)).
BFILE	Binary data stored in an external file (up to 4 GB)
ROWID	A base-64 number system representing the unique address of a row in its table

# **Datetime Data Types**

You can use several datetime data types:

Data Type	Description
TIMESTAMP	Date with fractional seconds
INTERVAL YEAR TO MONTH	Stored as an interval of years and months
INTERVAL DAY TO SECOND	Stored as an interval of days, hours, minutes, and seconds

## **DEFAULT Option**

Specify a default value for a column during the CREATE table.

```
... hire_date DATE DEFAULT SYSDATE, ...
```

- Literal values, expressions, or SQL functions are legal values.
- Another column's name or a pseudocolumn are illegal values.
- The default data type must match the column data type.

```
CREATE TABLE hire_dates

(id NUMBER(8),

hire_date DATE DEFAULT SYSDATE);

table HIRE_DATES created.
```

# Lesson Agenda

- Database objects
  - Naming rules
- CREATE TABLE statement
- Data types
- Overview of constraints: NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK constraints
- Creating a table using a subquery
- ALTER TABLE statement
- DROP TABLE statement

# **Including Constraints**

- Constraints enforce rules at the table level.
- Constraints ensure the consistency and integrity of the database.
- The following constraint types are valid:
  - NOT NULL
  - UNIQUE
  - PRIMARY KEY
  - FOREIGN KEY
  - CHECK

#### **Constraint Guidelines**

- You can name a constraint or the Oracle server generates a name by using the SYS\_Cn format.
- Create a constraint at either of the following times:
  - At the same time as the creation of the table
  - After the creation of the table
- Define a constraint at the column or table level.
- View a constraint in the data dictionary.

# **Defining Constraints**

Syntax:

```
CREATE TABLE [schema.]table
  (column datatype [DEFAULT expr]
  [column_constraint],
    ...
  [table_constraint][,...]);
```

Column-level constraint syntax:

```
column [CONSTRAINT constraint_name] constraint_type,
```

Table-level constraint syntax:

```
column,...
[CONSTRAINT constraint_name] constraint_type
  (column, ...),
```

# **Defining Constraints**

Example of a column-level constraint:

```
CREATE TABLE employees(
employee_id NUMBER(6)

CONSTRAINT emp_emp_id_pk PRIMARY KEY,
first_name VARCHAR2(20),
...);
```

Example of a table-level constraint:

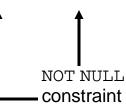

```
CREATE TABLE employees(
employee_id NUMBER(6),
first_name VARCHAR2(20),
...
job_id VARCHAR2(10) NOT NULL,
CONSTRAINT emp_emp_id_pk
PRIMARY KEY (EMPLOYEE_ID));
```

#### NOT NULL Constraint

#### Ensures that null values are not permitted for the column:

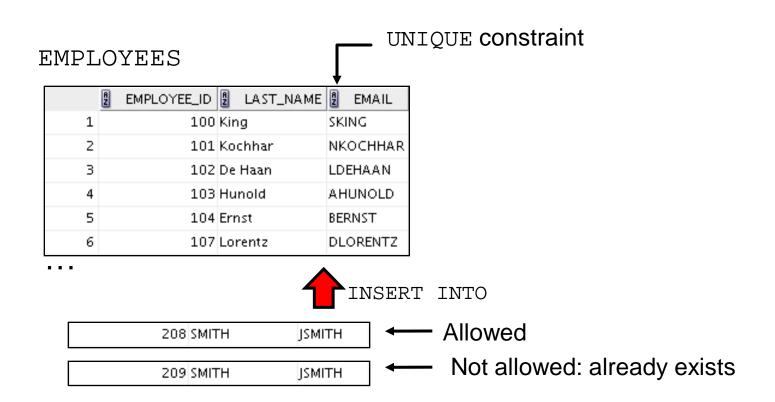

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	SALARY	COMMISSION_PCT	DEPARTMENT_ID 🛭 EMAI	L 2 PHONE_NUMBER	HIRE_DATE
	Steven	King	24000	(null)	90 SKING	515.123.4567	17-JUN-87
101	Neena	Kochhar	17000	(null)	90 NKOCHH	AR 515.123.4568	21-SEP-89
102	Lex	De Haan	17000	(null)	90 LDEHAAN	N 515.123.4569	13-JAN-93
103	Alexander	Hunold	9000	(null)	60 AHUNOL	D 590.423.4567	03-JAN-90
104	Bruce	Ernst	6000	(null)	60 BERNST	590.423.4568	21-MAY-91
107	Diana	Lorentz	4200	(null)	60 DLORENT	ΓZ 590.423.5567	07-FEB-99
124	Kevin	Mourgos	5800	(null)	50 KMOURG	OS 650.123.5234	16-NOV-99
141	Trenna	Rajs	3500	(null)	50 TRAJS	650.121.8009	17-OCT-95
142	Curtis	Davies	3100	(null)	50 CDAVIES	650.121.2994	29-JAN-97
143	Randall	Matos	2600	(null)	50 RMATOS	650.121.2874	15-MAR-98
144	Peter	Vargas	2500	(null)	50 PVARGAS	650.121.2004	09-JUL-98
149	Eleni	Zlotkey	10500	0.2	80 EZLOTKE	Y 011.44.1344.429018	29-JAN-00
174	Ellen	Abel	11000	0.3	80 EABEL	011.44.1644.429267	11-MAY-96
176	Jonathon	Taylor	8600	0.2	80 JTAYLOR	011.44.1644.429265	24-MAR-98
178	Kimberely	Grant	7000	0.15	(null) KGRANT	011.44.1644.429263	24-MAY-99
200	Jennifer	Whalen	4400	(null)	10 JWHALEN	515.123.4444	17-SEP-87
201	Michael	Hartstein	13000	(null)	20 MHARTS	ΓE 515.123.5555	17-FEB-96
202	Pat	Fay	6000	(null)	20 PFAY	603.123.6666	17-AUG-97
205	Shelley	Higgins	12000	(null)	110 SHIGGINS	515.123.8080	07-JUN-94
206	William	Gietz	8300	(null)	110 WGIETZ	515.123.8181	07-JUN-94

NOT NULL constraint (Primary Key enforces NOT NULL constraint.)

Absence of NOT NULL constraint (Any row can contain a null value for this column.)

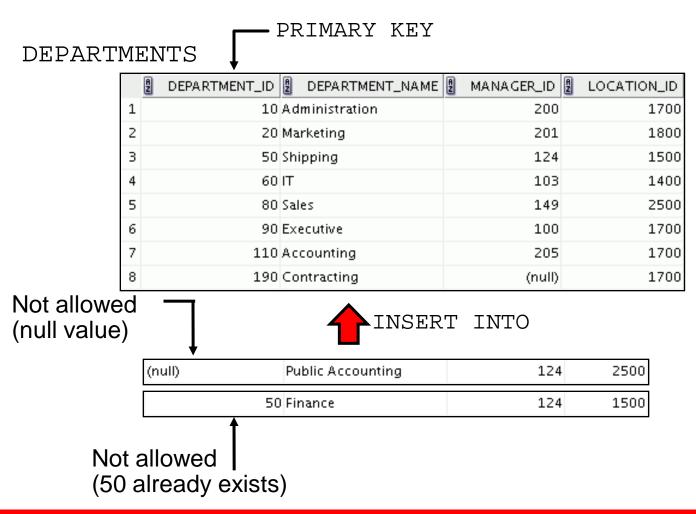

## **UNIQUE Constraint**

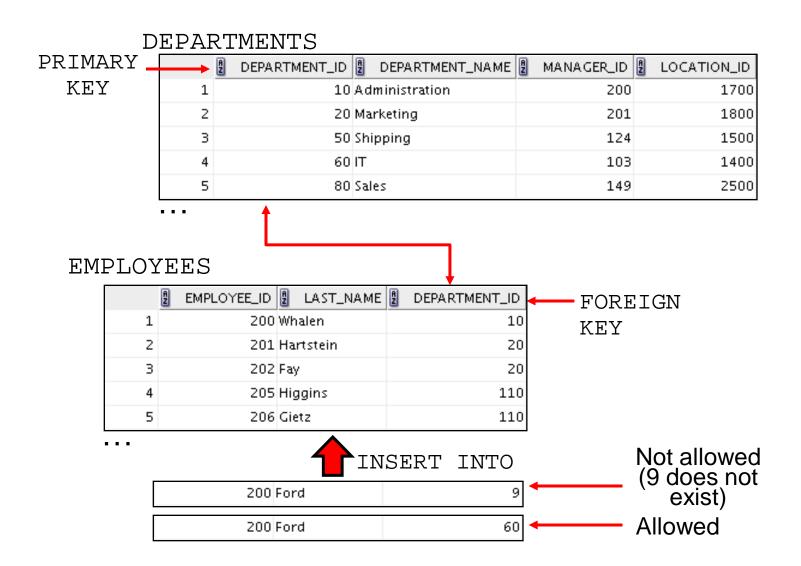

## **UNIQUE Constraint**

Defined at either the table level or the column level:

#### PRIMARY KEY Constraint

#### FOREIGN KEY Constraint

#### FOREIGN KEY Constraint

Defined at either the table level or the column level:

```
CREATE TABLE employees(
   employee_id
                   NUMBER(6),
                   VARCHAR2(25) NOT NULL,
   last name
   email
                   VARCHAR2(25),
                   NUMBER(8,2),
   salary
   commission_pct NUMBER(2,2),
   hire date
                   DATE NOT NULL,
   department id NUMBER(4),
   CONSTRAINT emp dept fk FOREIGN KEY (department id)
     REFERENCES departments(department_id),
   CONSTRAINT emp email uk UNIQUE(email));
```

## FOREIGN KEY Constraint: Keywords

- FOREIGN KEY: Defines the column in the child table at the table-constraint level
- REFERENCES: Identifies the table and column in the parent table
- ON DELETE CASCADE: Deletes the dependent rows in the child table when a row in the parent table is deleted
- ON DELETE SET NULL: Converts dependent foreign key values to null

#### **CHECK Constraint**

- It defines a condition that each row must satisfy.
- It cannot reference columns from other tables.

```
..., salary NUMBER(2)
    CONSTRAINT emp_salary_min
        CHECK (salary > 0),...
```

### CREATE TABLE: Example

```
CREATE TABLE teach_emp (
                   NUMBER(5) PRIMARY KEY,
         empno
                   VARCHAR2(15) NOT NULL,
         ename
         job
                   VARCHAR2(10),
                   NUMBER (5),
        mgr
        hiredate
                   DATE DEFAULT (sysdate),
        photo
                    BLOB,
                   NUMBER(7,2),
         sal
         deptno
                   NUMBER (3) NOT NULL
                     CONSTRAINT admin_dept_fkey REFERENCES
                      departments(department id));
```

# **Violating Constraints**

```
UPDATE employees
SET    department_id = 55
WHERE department_id = 110;
```

```
Error starting at line 1 in command:

UPDATE employees

SET department_id = 55

WHERE department_id = 110

Error report:

SQL Error: ORA-02291: integrity constraint (ORA1.EMP_DEPT_FK) violated - parent key not found 02291. 00000 - "integrity constraint (%s.%s) violated - parent key not found"

*Cause: A foreign key value has no matching primary key value.

*Action: Delete the foreign key or add a matching primary key.
```

Department 55 does not exist.

# **Violating Constraints**

You cannot delete a row that contains a primary key that is used as a foreign key in another table.

```
DELETE FROM departments
WHERE department_id = 60;
```

```
Error starting at line 1 in command:

DELETE FROM departments

WHERE department_id = 60

Error report:

SQL Error: ORA-02292: integrity constraint (ORA1.JHIST_DEPT_FK) violated - child record found

02292. 00000 - "integrity constraint (%s.%s) violated - child record found"

*Cause: attempted to delete a parent key value that had a foreign

dependency.

*Action: delete dependencies first then parent or disable constraint.
```

# Lesson Agenda

- Database objects
  - Naming rules
- Data types
- CREATE TABLE statement
- Overview of constraints: NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK constraints
- Creating a table using a subquery
- ALTER TABLE statement
- DROP TABLE statement

# **Creating a Table Using a Subquery**

 Create a table and insert rows by combining the CREATE TABLE statement and the AS subquery option.

```
CREATE TABLE table
[(column, column...)]
AS subquery;
```

- Match the number of specified columns to the number of subquery columns.
- Define columns with column names and default values.

# **Creating a Table Using a Subquery**

```
DESCRIBE dept80
```

Name	Null	Туре	
EMPLOYEE_ID LAST_NAME ANNSAL HIRE_DATE	NOT NULL	NUMBER(6) VARCHAR2(25) NUMBER	

# Lesson Agenda

- Database objects
  - Naming rules
- Data types
- CREATE TABLE statement
- Overview of constraints: NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK constraints
- Creating a table using a subquery
- ALTER TABLE statement
- DROP TABLE statement

#### **ALTER TABLE Statement**

#### Use the ALTER TABLE statement to:

- Add a new column
- Modify an existing column definition
- Define a default value for the new column
- Drop a column
- Rename a column
- Change table to read-only status

#### **ALTER TABLE Statement**

Use the ALTER TABLE statement to add, modify, or drop columns:

```
ALTER TABLE table

ADD (column datatype [DEFAULT expr]

[, column datatype]...);
```

```
ALTER TABLE table

MODIFY (column datatype [DEFAULT expr]

[, column datatype]...);
```

```
ALTER TABLE table
DROP (column [, column] ...);
```

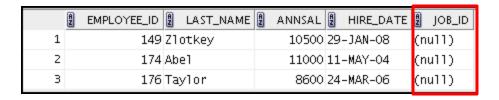

## **Adding a Column**

You use the ADD clause to add columns:

```
ALTER TABLE dept80
ADD (job_id VARCHAR2(9));

table DEPT80 altered.
```

The new column becomes the last column:

## **Modifying a Column**

You can change a column's data type, size, and default value.

```
ALTER TABLE dept80

MODIFY (last_name VARCHAR2(30));

table DEPT80 altered.
```

 A change to the default value affects only subsequent insertions to the table.

## **Dropping a Column**

Use the DROP COLUMN clause to drop columns that you no longer need from the table:

```
ALTER TABLE dept80
DROP (job_id);
```

table DEPT80 altered.

	A	EMPLOYEE_ID	LAST_NAME	A	ANNSAL	A	HIRE_DATE
1		149	Z1otkey		10500	29-	JAN-08
2		174	Abel		11000	11-	MAY-04
3		176	Taylor		8600	24-	MAR-06

## SET UNUSED Option

- You use the SET UNUSED option to mark one or more columns as unused.
- You use the DROP UNUSED COLUMNS option to remove the columns that are marked as unused.
- You can specify the ONLINE keyword to indicate that DML operations on the table will be allowed while marking the column or columns UNUSED.

```
ALTER TABLE <table_name>

SET UNUSED(<column_name>[ , <column_name>]);

OR

ALTER TABLE <table_name>

SET UNUSED COLUMN <column_name> [, <column_name>];
```

```
ALTER TABLE < table_name > DROP UNUSED COLUMNS;
```

# **Read-Only Tables**

You can use the ALTER TABLE syntax to:

- Put a table in read-only mode, which prevents DDL or DML changes during table maintenance
- Put the table back into read/write mode

```
ALTER TABLE employees READ ONLY;

-- perform table maintenance and then
-- return table back to read/write mode

ALTER TABLE employees READ WRITE;
```

# Lesson Agenda

- Database objects
  - Naming rules
- Data types
- CREATE TABLE statement
- Overview of constraints: NOT NULL, UNIQUE, PRIMARY KEY, FOREIGN KEY, CHECK constraints
- Creating a table using a subquery
- ALTER TABLE statement
- DROP TABLE statement

## **Dropping a Table**

- Moves a table to the recycle bin
- Removes the table and all its data entirely if the PURGE clause is specified
- Invalidates dependent objects and removes object privileges on the table

```
DROP TABLE dept80;
table DEPT80 dropped.
```

#### Quiz

To do which three of the following can you use constraints?

- Enforce rules on the data in a table whenever a row is inserted, updated, or deleted.
- b. Prevent the dropping of a table.
- c. Prevent the creation of a table.
- d. Prevent the creation of data in a table.

# **Summary**

In this lesson, you should have learned how to use the CREATE TABLE, ALTER TABLE, and DROP TABLE statement to create a table, modify a table and columns, and include constraints.

- Categorize the main database objects
- Review the table structure
- List the data types that are available for columns
- Create a simple table
- Explain how constraints are created at the time of table creation
- Describe how schema objects work

#### **Practice 11: Overview**

#### This practice covers the following topics:

- Creating new tables
- Creating a new table by using the CREATE TABLE AS syntax
- Verifying that tables exist
- Altering tables
- Adding columns
- Dropping columns
- Setting a table to read-only status
- Dropping tables
